# Action-Plan Issues

Bruce Driver  
Consultant to  
Western Resource Advocates

# Action-plan Issues #1

- Aggressive implementation of DSM
- Keep working on and resolve intermittent resource integration issues
- Bear down on CSP and its role on the TS system
- Bolster natural gas infrastructure
- Plan for new transmission capacity to move renewables from GDAs to load

## Action-plan Issues #2

- Increase TS's understanding of the role that storage, new “clean-energy” and “clean coal” (IGCC w/CCS) and post-capture combustion might play on the TS system
- Work with TS membership to incentivize DSM and distributed generation that is cost-effective for the TS system

## Action-plan Issues #3

- Drop plans to consider new pulverized coal capacity w/o CCS
- Work with TS Board, and with input from stakeholders, to visualize and create a “Tri-State of the future” that incorporates environmental stewardship as an objective
